Combatting Infectious Diseases with Research Networks

The Collaborative Research Center of Okayama University for Infectious Diseases in India (CRCOUI) started up in 2007 at the National Institute of Cholera and Enteric Diseases (NICED) in Kolkata, India. CRCOUI is one of the research centers of the “Japan Initiative for a Global Research Network on Infectious Diseases: J-GRID”, which has been governed by the Ministry of Education, Culture, Sports, Science and Technology (MEXT) of Japan. It was transferred to the control of the newly established “Japan Agency for Medical Research and Development: AMED” in April 2015.

The major causes of death in developed countries including Japan are so-called lifestyle-related disease or non-communicable diseases (NCDs), such as malignant tumor (cancer), heart disease and cerebral apoplexy. However, infectious diseases are still responsible for a high number of mortalities in developing countries, especially among children under the age of five. World Health Statistics published by the World Health Organization report a high percentage of mortality from infectious diseases such as HIV/AIDS, diarrhea, measles, malaria and pneumonia in children of South and Southeast Asian and African countries, which prompted the establishment of J-GRID.

One example of how infectious disease continues to claim lives is diarrhea, which accounted for 15% and 10% of total deaths among children under the age of five in India in the years 2000 and 2013, respectively. As a result, the main project of the CRCOUI is concentrated on diarrheal disease.
research. Three Okayama University researchers and one office secretary reside in the center and carry out the following research themes in collaboration with NICED staff.

1. Active surveillance of diarrheal patients
2. Development of dysentery vaccines
3. Viable but nonculturable (VBNC) *Vibrio cholerae*
4. Pathogenic mechanisms of various diarrheagenic microorganisms
5. Genome analysis of diarrheagenic microorganisms and molecular epidemiology
6. Development of therapeutic and diagnostic drugs for diarrheal diseases

The recent main research publications are as follows:
