

Grading

Okayama University uses the GPA (Grade Point Average) system. The GPA system is widely used in Europe and the United States for grading students' academic performances. The following table explains how academic performances are stated and grade points are calculated in the GPA system.

Grade	GP	Score	Standards, etc.
A+	See the GP calculation method shown outside this table.	90-100	Passed (Credits given)
A		80-89	
B		70-79	
C		60-69	
F	0	0-59	Not passed (Credits not given)
◆ (Recognized)	N/A	Not given	Passed (Credits given) accredited as acquired at Okayama University
Pass	N/A	Not given	Passed (Credits given) accredited without grade points because of the characteristic of the subject
M (Not passed)	N/A	Not given	Not passed (Credits not given)

(Note) "hold" refers to those whose evaluation (grade) is pending, and is not subject to GP calculation.

1. GP calculation method

$$GP = (\text{Score} - 55) / 10$$

- * GP for grade "F" (Not passed: Score less than 60 points) is 0. GP does not apply to such categories as "Recognized," "Pass," and "Not passed."

2. GPA calculation method

GPA is calculated by multiplying the credit for each registered course by the GP for that registered course and divide the sum by the total number of credits for the registered courses.

$$GPA = \frac{\text{Sum of the (Credit for each registered} \times \text{GP for each registered course)}}{\text{Total number of credits for the registered courses}}$$

3. Courses to which GPA does not apply

- Courses for which credits are granted based on recognition or completion, without indication of scores.
- Courses for which credits earned at an educational institution other than Okayama University are recognized to be added to a student's academic transcript
- Courses of which enrollment was cancelled after registration
